

Carbon Management Scope

The University aims to comply with the International Greenhouse Gas (GHG) Protocol, and has established the following scope for its emissions reporting:

[^]Including Wantage Hall, which is part of the central Whiteknights' supply

*International travel emissions in relation to UK operations are included as 'in scope' business travel

[#]UPP, who own the halls, have committed to pro-actively help the University reach its carbon targets

^βThe removal of mandatory Site Waste Management Plans means construction waste is no longer centrally recorded, though the 2016-2021 Waste Strategy seeks to address this point

This is a change to the scope set out in the original 2011 Carbon Management Plan and has been agreed in order to more appropriately reflect the scope of emissions over which the University has influence, to exclude properties which are not under the University's operational control and to include the impacts of 'radiative forcing' from air travel. Re-baselining has therefore taken place (detailed in the 2016-21 Carbon & Water Management Plan) and care must be taken to ensure that any comparison of progress is against the revised baseline.
